Instructions for printing and setting up the tape measure

Print
Before printing, make sure that the "**fit to page**" option in the printing dialog box is disabled so that the printer does not reduce or increase the dimensions of the tape.

Crop
Using scissors or a stylus, cut out all the continuous black lines indicated with the "scissors" to create the segments of the tape.

Assembly
Fold and rotate the ends (as indicated on the print) by joining the dotted lines until a single tape is assembled.

Fix the folds
After assembly, fix the folds of the tape using glue, adhesive tape or a stapler.
